Connecting VSCode to your Docker container

Connecting VSCode to your Docker container

This guide will help you set up Visual Studio Code (VSCode) to connect to your running Docker container. This will allow you to edit and execute code inside the container seamlessly.

Connecting VSCode to your Docker container

This guide will help you set up Visual Studio Code (VSCode) to connect to your running Docker container. This will allow you to edit and execute code inside the container seamlessly.

Later in the course, we will probably use Cursor instead of VSCode.

Prerequisites

Before you begin, ensure that you have:

Prerequisites

Before you begin, ensure that you have:

1. A **running Docker container** with SSH enabled.

Prerequisites

Before you begin, ensure that you have:

1. A **running Docker container** with SSH enabled.
    - Follow the steps in "Start the class Docker container"

Prerequisites

Before you begin, ensure that you have:

1. A **running Docker container** with SSH enabled.
    - Follow the steps in "Start the class Docker container"
2. **VSCode** installed on your computer.

Prerequisites

Before you begin, ensure that you have:

1. A **running Docker container** with SSH enabled.
    - Follow the steps in "Start the class Docker container"
2. **VSCode** installed on your computer.
    - Download it from Visual Studio Code.

Prerequisites

Before you begin, ensure that you have:

1. A **running Docker container** with SSH enabled.
   - Follow the steps in "Start the class Docker container"
2. **VSCode** installed on your computer.
   - Download it from Visual Studio Code.
   - Install the "Remote - SSH" and "Dev - Containers" extensions from the Extensions Marketplace.

Connect using the Dev - Containers Extension

You can use the “Dev - Containers” extension to connect directly to the running container:

Connect using the Dev - Containers Extension

You can use the “Dev - Containers” extension to connect directly to the running container:

1. **Attach to the container**:

Connect using the Dev - Containers Extension

You can use the "Dev - Containers" extension to connect directly to the running container:

1. **Attach to the container**:
    - Press `Ctrl+Shift+P` (or `Cmd+Shift+P` on Mac) to open the command palette.

Connect using the Dev - Containers Extension

You can use the "Dev - Containers" extension to connect directly to the running container:

1. **Attach to the container**:
   - Press `Ctrl+Shift+P` (or `Cmd+Shift+P` on Mac) to open the command palette.
   - Type `Dev-Containers: Attach to Running Container` and select it.

Connect using the Dev - Containers Extension

You can use the "Dev - Containers" extension to connect directly to the running container:

1. **Attach to the container**:
   - Press `Ctrl+Shift+P` (or `Cmd+Shift+P` on Mac) to open the command palette.
   - Type `Dev-Containers: Attach to Running Container` and select it.
   - Choose `class-container` from the list.

Test your setup

1. **Create a Python file**:

Test your setup

1. **Create a Python file**:
   - Inside the container, create a file named `test.py`:

```python
print("Hello from Docker!")
```

Test your setup

1. **Create a Python file**:
   - Inside the container, create a file named `test.py`:

     ```python
     print("Hello from Docker!")
     ```

2. **Run the file**:

Test your setup

1. **Create a Python file**:
   - Inside the container, create a file named `test.py`:

     ```python
     print("Hello from Docker!")
     ```

2. **Run the file**:
   - Use the integrated terminal in VSCode to run:

     ```
     python3 test.py
     ```

Test your setup

1. **Create a Python file**:
   - Inside the container, create a file named `test.py`:

     ```python
     print("Hello from Docker!")
     ```

2. **Run the file**:
   - Use the integrated terminal in VSCode to run:

     ```
     python3 test.py
     ```

   - Verify that the output is `Hello from Docker!`.

Troubleshooting

1. **No container found**:

Troubleshooting

1. **No container found**:
   - Verify the container is running using `docker ps`.

Troubleshooting

1. **No container found**:
   - Verify the container is running using `docker ps`.
2. **VSCode cannot attach to container**:

Troubleshooting

1. **No container found**:
   - Verify the container is running using `docker ps`.
2. **VSCode cannot attach to container**:
   - Check that the "Remote - Containers" extension is installed.

Troubleshooting

1. **No container found**:
   - Verify the container is running using `docker ps`.
2. **VSCode cannot attach to container**:
   - Check that the "Remote - Containers" extension is installed.
   - Ensure Docker Desktop is running.

Troubleshooting

1. **No container found**:
   - Verify the container is running using `docker ps`.
2. **VSCode cannot attach to container**:
   - Check that the "Remote - Containers" extension is installed.
   - Ensure Docker Desktop is running.
3. **Python not found**:

Troubleshooting

1. **No container found**:
   - Verify the container is running using `docker ps`.
2. **VSCode cannot attach to container**:
   - Check that the "Remote - Containers" extension is installed.
   - Ensure Docker Desktop is running.
3. **Python not found**:
   - Verify Python is installed in the container:

     ```
     python3 --version
     ```

Summary

This setup allows you to use a full-featured development environment while keeping your code and dependencies isolated in a container.
