Advanced bash

Advanced bash

- Bash basics covered navigation, files, pipes, and redirection.

- Bash basics covered navigation, files, pipes, and redirection.
- This chapter adds **superuser access**, **package management**, **search**, **aliases**, and **automation**.

sudo

- **sudo** runs a single command with **root** (administrator) privileges.

sudo

- **sudo** runs a single command with **root** (administrator) privileges.

sudo

- **sudo** runs a single command with **root** (administrator) privileges.

```
sudo apt update
```

sudo

- **sudo** runs a single command with **root** (administrator) privileges.

```
sudo apt update
```

- In the class container the default user is often root already; on a shared machine you need `sudo`.

Package management (APT)

- **`apt update`** — refresh the package index.

Package management (APT)

- **`apt update`** — refresh the package index.
- **`apt upgrade`** — upgrade installed packages.

Package management (APT)

- **`apt update`** — refresh the package index.
- **`apt upgrade`** — upgrade installed packages.
- **`apt install`** — install a new package.

Package management (APT)

- **`apt update`** — refresh the package index.
- **`apt upgrade`** — upgrade installed packages.
- **`apt install`** — install a new package.
- **`apt remove`** — uninstall a package.

Package management (APT)

- **`apt update`** — refresh the package index.
- **`apt upgrade`** — upgrade installed packages.
- **`apt install`** — install a new package.
- **`apt remove`** — uninstall a package.

Package management (APT)

- **`apt update`** — refresh the package index.
- **`apt upgrade`** — upgrade installed packages.
- **`apt install`** — install a new package.
- **`apt remove`** — uninstall a package.

```
sudo apt update
sudo apt install ripgrep
sudo apt remove nano
```

Package management (APT)

- **`apt update`** — refresh the package index.
- **`apt upgrade`** — upgrade installed packages.
- **`apt install`** — install a new package.
- **`apt remove`** — uninstall a package.

```
sudo apt update
sudo apt install ripgrep
sudo apt remove nano
```

- Update regularly for **security** patches on any Linux system.

Package management (APT)

- **`apt update`** — refresh the package index.
- **`apt upgrade`** — upgrade installed packages.
- **`apt install`** — install a new package.
- **`apt remove`** — uninstall a package.

```
sudo apt update
sudo apt install ripgrep
sudo apt remove nano
```

- Update regularly for **security** patches on any Linux system.
- Don’t remove packages you do not recognize; many are **system dependencies**.

Downloading files (`wget`)

- **`wget URL`** fetches a file over HTTP/HTTPS and saves it in the current directory (name taken from the URL unless you set **`-O path`**).

Downloading files (`wget`)

- **`wget URL`** fetches a file over HTTP/HTTPS and saves it in the current directory (name taken from the URL unless you set **`-O path`**).

Downloading files (`wget`)

- **`wget URL`** fetches a file over HTTP/HTTPS and saves it in the current directory (name taken from the URL unless you set **`-O path`**).

```
wget -O paper.pdf 'https://example.com/files/paper.pdf'
wget --quiet -O dataset.zip 'https://example.com/data/archive.zip'
```

Downloading files (`wget`)

- **`wget URL`** fetches a file over HTTP/HTTPS and saves it in the current directory (name taken from the URL unless you set **`-O path`**).

```
wget -O paper.pdf 'https://example.com/files/paper.pdf'
wget --quiet -O dataset.zip 'https://example.com/data/archive.zip'
```

- **`curl -L -o outfile URL`** is a common alternative (**`-L`** follows redirects). Install **`wget`** or **`curl`** in the container with **`apt`** if a minimal image lacks them, or add them to your Dockerfile.

ZIP archives (`unzip`)

- **`unzip`** extracts **`.zip`** archives. Use **`-d dir`** to unpack into a directory (the directory is created if needed).

ZIP archives (`unzip`)

- **`unzip`** extracts **`.zip`** archives. Use **`-d dir`** to unpack into a directory (the directory is created if needed).

ZIP archives (`unzip`)

- **`unzip`** extracts **`.zip`** archives. Use **`-d dir`** to unpack into a directory (the directory is created if needed).

```
unzip -q archive.zip -d /tmp/my_extract
```

ZIP archives (`unzip`)

- **`unzip`** extracts **`.zip`** archives. Use **`-d dir`** to unpack into a directory (the directory is created if needed).

```
unzip -q archive.zip -d /tmp/my_extract
```

- **`-q`** is quiet. **`unzip -l archive.zip`** lists contents without extracting.

Getting help

- `man command` — full manual page (`q` to quit).

Getting help

- **`man command`** — full manual page (**`q`** to quit).
- **`command --help`** — quick summary.

Getting help

- **`man command`** — full manual page (**`q`** to quit).
- **`command --help`** — quick summary.
- **`man -k keyword`** — search manual pages by keyword.

Getting help

- **`man command`** — full manual page (**`q`** to quit).
- **`command --help`** — quick summary.
- **`man -k keyword`** — search manual pages by keyword.

Getting help

- **`man command`** — full manual page (**`q`** to quit).
- **`command --help`** — quick summary.
- **`man -k keyword`** — search manual pages by keyword.

```
man ls
ls --help
man -k copy
```

Keyboard shortcuts

- **Tab** — auto-complete file names, commands, directories.

Keyboard shortcuts

- **Tab** — auto-complete file names, commands, directories.
- **Up / Down** — browse command history.

Keyboard shortcuts

- **Tab** — auto-complete file names, commands, directories.
- **Up / Down** — browse command history.
- **Ctrl+R** — reverse-search through history.

Keyboard shortcuts

- Tab — auto-complete file names, commands, directories.
- Up / Down — browse command history.
- Ctrl+R — reverse-search through history.
- Ctrl+C — stop a running command.

Aliases

- An **alias** is a shortcut for a longer command.

Aliases

- An **alias** is a shortcut for a longer command.

Aliases

- An **alias** is a shortcut for a longer command.

```
alias ll='ls -alF'
alias please='sudo $(fc -ln -1)'
```

Aliases

- An **alias** is a shortcut for a longer command.

```
alias ll='ls -alF'
alias please='sudo $(fc -ln -1)'
```

- **`alias`** (no arguments) lists current aliases.

Aliases

- An **alias** is a shortcut for a longer command.

```
alias ll='ls -alF'
alias please='sudo $(fc -ln -1)'
```

- **`alias`** (no arguments) lists current aliases.
- **`unalias name`** removes one.

Aliases

- An **alias** is a shortcut for a longer command.

```
alias ll='ls -alF'
alias please='sudo $(fc -ln -1)'
```

- **`alias`** (no arguments) lists current aliases.
- **`unalias name`** removes one.
- To keep aliases across sessions, add them to **`~/.bashrc`**:

Aliases

- An **alias** is a shortcut for a longer command.

```
alias ll='ls -alF'
alias please='sudo $(fc -ln -1)'
```

- **`alias`** (no arguments) lists current aliases.
- **`unalias name`** removes one.
- To keep aliases across sessions, add them to **`~/.bashrc`**:

Aliases

- An **alias** is a shortcut for a longer command.

```
alias ll='ls -alF'
alias please='sudo $(fc -ln -1)'
```

- **`alias`** (no arguments) lists current aliases.
- **`unalias name`** removes one.
- To keep aliases across sessions, add them to **`~/.bashrc`**:

```
echo "alias ll='ls -alF'" >> ~/.bashrc
source ~/.bashrc
```

Searching text: `grep`

- `grep` finds lines matching a pattern.

Searching text: `grep`

- **`grep`** finds lines matching a pattern.

Searching text: `grep`

- **`grep`** finds lines matching a pattern.

```
grep 'error' /var/log/syslog
history | grep git
```

Finding files

- **`find`** searches the filesystem by name, type, date, etc.

Finding files

- **`find`** searches the filesystem by name, type, date, etc.

Finding files

- **`find`** searches the filesystem by name, type, date, etc.

```
find . -name "*.txt"
find /workspace -type d -name "data"
```

Finding files

- **`find`** searches the filesystem by name, type, date, etc.

```
find . -name "*.txt"
find /workspace -type d -name "data"
```

- **`locate`** is faster (uses a pre-built index), but the index may be stale; update with `sudo updatedb`.

Remote access: SSH and SCP

- **ssh** opens a shell on a remote machine.

Remote access: SSH and SCP

- **ssh** opens a shell on a remote machine.
- **scp** copies files over SSH.

Remote access: SSH and SCP

- **ssh** opens a shell on a remote machine.
- **scp** copies files over SSH.

Remote access: SSH and SCP

- **`ssh`** opens a shell on a remote machine.
- **`scp`** copies files over SSH.

```
ssh user@hostname
scp results.csv user@hostname:/data/
```

Remote access: SSH and SCP

- **ssh** opens a shell on a remote machine.
- **scp** copies files over SSH.

```
ssh user@hostname
scp results.csv user@hostname:/data/
```

- Key-based auth is covered in SSH Keys.

Scheduled tasks: `cron`

- **`crontab -e`** opens your personal cron table.

Scheduled tasks: `cron`

- **`crontab -e`** opens your personal cron table.
- Each line: `minute hour day month weekday command`.

Scheduled tasks: `cron`

- **`crontab -e`** opens your personal cron table.
- Each line: `minute hour day month weekday command`.

Scheduled tasks: `cron`

- **`crontab -e`** opens your personal cron table.
- Each line: `minute hour day month weekday command`.

```
# Run backup every day at 5 AM
0 5 * * * /home/user/backup.sh
```

Scheduled tasks: `cron`

- **`crontab -e`** opens your personal cron table.
- Each line: `minute hour day month weekday command`.

```
# Run backup every day at 5 AM
0 5 * * * /home/user/backup.sh
```

- **`crontab -l`** lists current jobs.

Summary

- `sudo` for admin commands; `apt` for packages.

Summary

- **`sudo`** for admin commands; **`apt`** for packages.
- **`wget`** (or **`curl`**) to download files; **`unzip`** to extract **`.zip`** archives.

Summary

- **`sudo`** for admin commands; **`apt`** for packages.
- **`wget`** (or **`curl`**) to download files; **`unzip`** to extract **`.zip`** archives.
- **`man`**, **`--help`**, **`man -k`** for documentation.

Summary

- **`sudo`** for admin commands; **`apt`** for packages.
- **`wget`** (or **`curl`**) to download files; **`unzip`** to extract **`.zip`** archives.
- **`man`**, **`--help`**, **`man -k`** for documentation.
- Aliases save keystrokes; put them in `~/.bashrc`.

Summary

- **sudo** for admin commands; **apt** for packages.
- **wget** (or **curl**) to download files; **unzip** to extract **.zip** archives.
- **man**, **--help**, **man -k** for documentation.
- Aliases save keystrokes; put them in `~/.bashrc`.
- **grep** and **find** to search text and files.

Summary

- **`sudo`** for admin commands; **`apt`** for packages.
- **`wget`** (or **`curl`**) to download files; **`unzip`** to extract **`.zip`** archives.
- **`man`**, **`--help`**, **`man -k`** for documentation.
- Aliases save keystrokes; put them in `~/.bashrc`.
- **`grep`** and **`find`** to search text and files.
- **`ssh`** / **`scp`** for remote work; **`cron`** for scheduled jobs.
